

## Tips and Advices Regarding Your DS150E unit

---

- NEVER CONNECT OR DOWNLOAD ANYTHING FOR YOUR CLONE FROM THE INTERNET
- Where possible install your Clone DS150E on a laptop with no Internet connection at all.
- The reason is this, every time you use the Delphi software you will get window stating: "This version is out of date click OK to update". You will have to click "OK" to start the software, but if you do when the Wi-Fi is connected you will block your unit, the software, the HDD will have to be wiped clean and the OS reinstalled.
- Over the life of the product it is almost a certainty you will make that mistake. The best way to avoid this is to have a laptop that never connects to Internet at all.
- You will soon be able to download updates from my website [www.obdstore.co.uk](http://www.obdstore.co.uk), only via another laptop and then to a USB flash card to transport over to the Diagnostic laptop without a direct connection.

**Many Thanks.**
